

## 5.4.5 Commit Your Code

**Omar** is going to love these results—and V. Isualize may want to look at your code herself. In anticipation for your big break, you make sure to update your GitHub repository.

### ADD/COMMIT/PUSH

After you save your `PyBer.ipynb` file to your computer, add it to the PyBer\_Analysis GitHub repository by following these steps:

1. Launch the command line or Git Bash.
2. Navigate to your PyBer\_Analysis folder.
3. Check the status with `git status`.
4. Add all the file(s) by using `git add .`.
5. Commit the files to be added to the repository and add a Git message, with `git commit -m "message"`.
6. Add the file to your repository by using `git push`.

## 7. Refresh your GitHub page to see the changes to your repository.
